Technical specifications

Functioning voltage: 230 V AC

The WEEE symbol means that the Smartbox must be eliminated separately. Whenever you need to disposed of the product, take it to a waste collection container or to a specialized collection point. By doing this, you will help to preserve our natural resources, protect the humans health as well as contributing protecting the environment.

SMARTBOX

Instructions Manual and
technical documentation

For radiators with i2control unit

ENGLISH

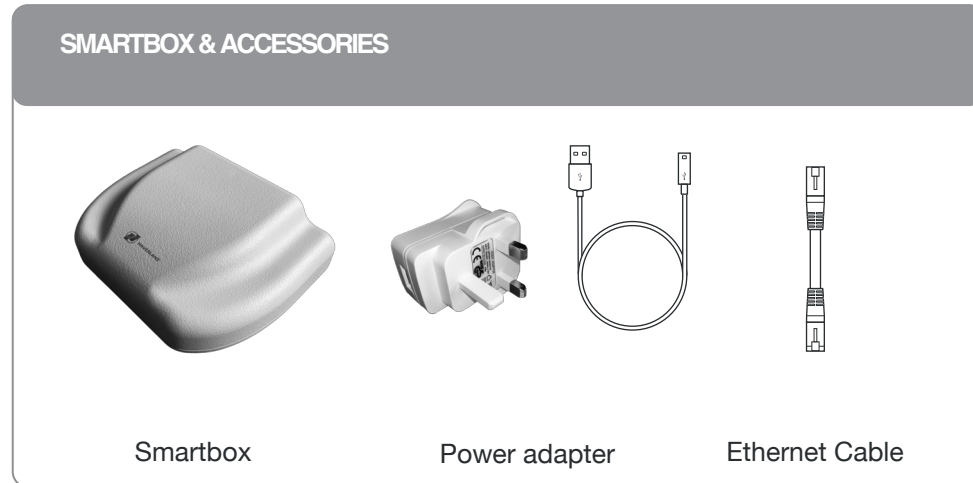

Haverland

i2control.haverland.com

What's inside the box?

What our Smartbox is for?

The Smartbox works as an intermediary between Haverland's radiators, with built-in communications unit, and our Haverland App.

It allows to remotely control all the settings of the radiators installed in your home, managing your heating in a very easy way anywhere, anytime.

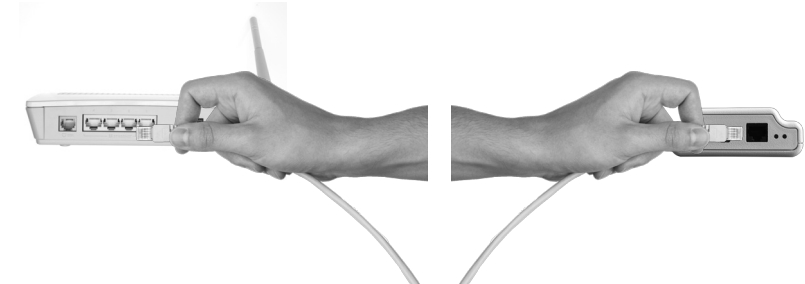

With a click, through our App, you will be able to control all your heating system's settings.

- Turn the radiators On and Off
- Set the desired temperature remotely.
- Knowing the ambient temperature of each room
- Set the temperatures (Eco- Comfort – Antifreeze)
- Select the functioning mode (Learning – Sensor – Programming – Manual)
- Touchpad Lock of each radiator
- Daily programming, hour by hour.
- Power rationalizing

Connection

Installation

- Connect the Ethernet cable to your router and to the Smartbox.

- Connect the supplied power adapter to the current.

INFO: After connecting the Smartbox, the two LED lights must turn On simultaneously. If this doesn't happen, it could be that the Smartbox is faulty.

SMARTBOX'S LEDS ACTIVITY	INDICATIVE
 LEDs Off	Disconnected
 • GREEN Flashing • YELLOW On	Ethernet link has been detected. Connecting
 • GREEN Flashing • YELLOW Flashing	Successfully connected
